

Care Insights

Embedded intelligence that adapts to every patient and every provider.

Care Insights eliminates the noise and brings relevant, real-time clinical signals directly into the EHR workflow. From risk adjustment to medication gaps, providers can act in seconds, without jumping between systems, clicking through portals, or second-guessing what matters most.

Care teams can act quickly and confidently by agreeing to a diagnosis, tracking a preventive procedure, or addressing social risks, without disrupting their workflow.

The result: more accurate documentation, better outcomes, and more time spent on patient care.

Comprehensive Insight Categories

Care Insights goes beyond diagnosis and care gaps. It delivers a full spectrum of clinical insight types that support value-based care, risk management, and quality of care initiatives:

- **Diagnosis Gaps:** Recaptured and suspected opportunities to assess and document condition, supporting accurate risk adjustment
- **Risk:** Predictive indicators and patient-level risk profiles
- **Quality:** Gaps tied to quality measure programs, such as HEDIS, STAR, ACO, and more
- **Rx:** Medication adherence, utilization trends, and drug safety alerts
- **Utilization:** ER visits, inpatient admissions, avoidable utilization and more
- **Care Management:** Chronic care needs, follow-ups, and transitions of care
- **Social Determinants of Health (SDoH):** Opportunities for assessment, intervention, and confirming needs have been addressed
- **ADT:** Notification of admissions, discharge and transfer.
- **Other Clinical Insights:** Flexible category for uncategorized or partner-defined insights
