Vim helps providers place HEDIS, HCC, and other gap data directly into EHR workflows and collect clinician feedback from the point of care. This saves time and improves performance, and is accomplished through Vim's low-lift EHR integration engine which dramatically reduces implementation lift for providers.

Provider data connectivity replaces manual gap data distribution.

Augments existing EHR interface, replacing portals, spreadsheets, and print-outs.

UI enhancement saves clicks and time by connecting data to workflows.

Vim's point of care connection platform is trusted by leading providers and health plans
