

Improve performance on quality and risk adjustment through Vim's Care Gaps solution

Vim puts quality and diagnosis gaps directly into EHR workflows for enhanced value-based care performance and improved clinician experience.

Vim helps providers **place HEDIS, HCC, and other gap data directly into EHR workflows and collect clinician feedback from the point of care.** This saves time and improves performance, and is accomplished through **Vim's low-lift EHR integration engine which dramatically reduces implementation lift for providers.**

Lower administrative burden - engage providers Vim recognizes when a provider is viewing a patient with a suspected gap and alerts them at the right moment in their workflow.

Free physicians and their teams from spreadsheets Augments existing EHR interface, replacing portals, spreadsheets, and print-outs.

Live in weeks with minimal lift Vim's lightweight integration process is easy and fast for provider groups - go live in weeks with no third-party dependencies or costs.

Vim's point of care connection platform is trusted by leading providers and health plans

Approved by the most diligent and respected security and compliance bodies in the industry
